CELL COUNTING AREAS IN NEUBAUER CHAMBER. WBC Counting Area The four large squares placed at the corners are used for white blood cell count. Since their concentration is lower than red blood cells a larger area is required to perform the cell count. RBC Counting Area The large center square is used for RBC counts.

RBC count. The red blood cell count on the routine CBC is the concentration of red blood cells, expressed in millions/ $\mu$ L of whole blood. While red blood cell counts can be performed by manual techniques, such as a hemocytometer, these are time-consuming and inaccurate. We do, however, use them for counting RBC in fluids with low cell counts,...

Many biological applications such as microbiology, cell culture, blood work and many others that use cells require that we determine cell concentration for our experiment. Cell counting is rather straightforward and requires a counting chamber called a hemocytometer, a device invented by the 19th century French anatomist Louis-Charles Malassez to perform blood cell counts.

A red blood cell count is a blood test that your doctor uses to find out how many red blood cells

(RBCs) you have. It's also known as an erythrocyte count. The test is important because RBCs contain hemoglobin, which carries oxygen to your body's tissues. The number of RBCs you have can affect how much oxygen your tissues receive.

**Red Blood Cell Count (RBC): Purpose, Procedure, and ...**

Medical uses. For patients who need blood transfusion, a blood count may be used to get data which would help plan an amount of treatment. In such cases, the person should have only one blood count for the day, and the transfusion of red blood cells or platelets should be planned based on that.
