I've done both mathematical system modeling and computer simulation. It's very powerful if you can do both on the same problem. The strength of mathematical modeling - for example, Queueing Theory, but it could be a lot of other modeling techniques - is that you get general equations and mathematical expressions for the relationships among the variables and results.

What is the difference between mathematical modeling and simulation modeling? - Quora

This book covers a wide range of solving various types of mathematical modeling problems such as axiom sets, genetics, stratified population, Markov Chain, Linear programming and so on. Texts are well written and problems are challenging.

by Laurence G. Hassebrook 2-27-2013 We simulate On Off Keying (OOK) modulation and demodulation. The modulated signal is synthesized by using an upsampled random bit stream, modulated by a carrier wave and then corrupted by Additive White Gaussian Noise (AWGN). Assuming no phase error, the modulated signal is demodulated using a mixer configuration.

Computer simulation is the reproduction of the behavior of a system using a computer to simulate the outcomes of a mathematical model associated with said system. Since they allow to check the reliability of chosen mathematical models, computer simulations have become a useful tool for the mathematical modeling of many natural systems in physics (computational physics), astrophysics ...
