### **Mercury Engine Trim Sensor - altfest.vcu.edu**

The trim sensor lets the engine know where the engine is located in the trim range. It does this by a pin that spins a knob on the sensor as the engine trims up. If this sensor fails and falsely tells the computer that the engine is trimmed all the way up, it will limit the RPM's of the engine, so it won't go over 4100 RPM's.

### **Mercury Marine | FourStroke 2.5-25hp**

Mercury had no answer for the loss of reading at zero trim to half trim. The solution was to turn the ram shaft 180 degrees which engaged the trim sensor at rest (zero) and now reads all the way through the trim tilt range. I had changed all 4 rams and the two on the port engine were right and two on starboard were wrong.
