### **Manual Flash Photography**

The 1/2 setting on manual flash mode is simply 1/2 the power of the full flash. What begins to get tricky is that digital cameras don't have a built in flash meter. When shooting in manual mode, the exposure meter will guide you to the right exposure, but there isn't a similar flash meter for using manual flash mode.

### **Flash Photography: How To Use Manual Flash Mode**

With the aperture still at f/11, and since I would be holding the flash from the left about three feet, I found that at 1/8 power, a flash to subject distance of three feet was indicating a flash exposure. (Again, I prefer manual flash exposure!) Since I didn't want the ambient light to affect the exposure, I adjusted my shutter speed to 1 ...

### **Flash Photography Tutorial. How to shoot in Manual Flash? How to use a Speed Light**

Pros and cons of manual flash. In situations where the distance between the flash and the subject is constant and fixed, you can opt to use manual flash settings. A manual flash is extremely useful in situations where you have to fire away a series of shots of the subject repeatedly, under similar exposure conditions.

### **How to Understand the Difference Between TTL Versus Manual ...**

Manual Mode (as opposed to TTL) results in the flash outputting a predetermined amount of light when triggered that I've dialed in. The camera no longer turns the flash on and off to get a correct exposure. Flash output in Manual Mode is controlled by reducing or increasing the power setting of the flash.

In Manual (M) mode, the camera exposes ambient light based on how you set the aperture, shutter speed and ISO. The flash exposure is then calculated based on whatever remaining light is necessary to illuminate the subject. Manual mode therefore enables a much broader range of flash ratios than the other modes.
