M43 B18 Engine Water Pump Change - docs.ringplus.net

It is an impeller pump and is usually buried under the timing belt cover on the side of the engine. The pump is operated by the engine's drive belt - as the belt turns, the pump turns. Blades on the pump force coolant to flow through the engine and back to the radiator to be cooled by a forced air cooling fan. Although the water pumps in ...

BMW 318 Water Pumps - Online Automotive

The water pump is a part of your vehicle with an important role in the engine's cooling system. The job of the water pump is to cool down the engine with coolant, which in turn assists in making sure the engine does not overheat. Engine overheating is a very dangerous thing for your car and could lead to eventual engine failure.
