Linear Algebra Done Right is, in my opinion, one of the most high level undergraduate linear algebra books out there. Axler takes the non-standard route of proving everything without determinants. The book covers many advanced topics, such as polar & singular value decomposition, operators on complex vector spaces and Jordan form, things that typical undergrad classes in LA won't cover.

this course will emphasize abstract vector spaces and linear maps. The audacious title of this book deserves an explanation. Almost all linear algebra books use determinants to prove that every linear operator on a finite-dimensional complex vector space has an eigenvalue. Determinants are difficult, nonintuitive, and often defined without motivation.
