In engineering testing we found the optimum cooling CFM range for Harley motors is 185 CFM minimum and 225 CFM maximum. Any fan operating outside of that range is not going to be effective. The LeNale fan does not draw high amperage so you can leave the fan running at idle without draining the battery.

There was just so much heat to deal with, and not a lot of room to mount a powerful cooling system. And just as important, the cooling system had to be very attractive and look like it was an original part of the bike. Sixteen prototypes later, we were confident that "Hammerhead Engineering" had finally solved the Harley overheating problem.

I researched the two main Harley-Davidson cooling fans on the market--this unit (fairly new to the market) and the LeNale cooling fan, which costs about \$100 less and has been around for awhile. Much of the feedback on the LeNale unit was negative--short lifespan and unreliability in wet conditions. I decided on this one.

Engineers normally design these systems together because their operation is closely related. For example, once the indoor air supply is heated or cooled to an adequate temperature, the ventilation system distributes it throughout indoor spaces. In turn, the operation of air-handling systems influences the load on heating and cooling equipment.
