The principle of linear superposition is of fundamental importance in the study of partial differential equations. This principle is used extensively in solving linear partial differential equations by the method of separation of variables. Suppose that there are infinitely many solutions  $u_1(x,y)$ ,  $u_2(x,y)$ , ...

Linear PDEs can be reduced to systems of ordinary differential equations by the important  
technique of separation of variables. This technique rests on a characteristic of solutions to  
differential equations: if one can find any solution that solves the equation and satisfies the  
boundary conditions, then it is the solution (this also applies to ODEs).
