MerCruiser Overheating - Merc Cruiser Troubleshooting Guide Troubleshooting can determine faults and help correct mechanical or cooling system problems. This troubleshooting guide will focus on actions needed to correct engine overheating issues for MerCruiser Inboard motors.

MerCruiser Overheating - Merc Cruiser Troubleshooting Guide

Troubleshooting for Fresh Water Marine Cooling System. Most marine FWC thermostats open at 160°F and will be fully open at approximately 180°F. A new clean system under moderate load should operate at the lower end of this range and a dirty system under full load might operate in the upper range. Any temperature that reads outside of this range is abnormal and should be investigated.

Cooling System for MerCruiser - Marine Engine Parts

In the old days, many marine engine cooling systems were of the "raw-water" variety, meaning simply that they relied on pumping whatever water the boat was floating in through the engine and pumping it out the exhaust system—salt water, polluted water, algae-infested water, whatever was available.

Inboard Engine Cooling Systems - boats.com

Start the engine and immediately checks for problems such as oil or coolant leaks. As the engine warms the level in the reservoir will drop. Add coolant as needed. Let the engine reach normal operating temperature as so the thermostat can open and properly circulate coolant throughout the block to purge all air from the cooling system.
