Re: '86 Mercruiser 200 Thunderbolt ignition Well, it looks like they used a Delco EST distributor and coil. Not a problem, Volvo used them for V8 and V6 engines, and Mercruiser used them for the 3.0L engines and still do. They do work with the shift interrupt system, Since you have it, might as well make the best use of it.

Magnetic pickups (MPUs) are speed sensors that detect the speed of a prime mover, typically an engine or turbine. They are the communication link between your engine and a Woodward electronic governor control. The MPU is installed next to a drive shaft gear made of a material that reacts to a magnetic field.

NOTE: Inboard and I/O gas engines, outboards and diesels with tachometer signals other than magnetic pick-up will all function on one type of synchronizer. Diesels with magnetic pick-up 's require a magnetic pick-up synchronizer which functions only for this application. Be sure you have the right synchronizer for your engine application.
