Manatee Life Cycle Diagram - laylagrayce.com

Manatees, sometimes called sea cows, are large mammals that live in warm sea waters. They live in shallow coastal areas and feed on sea vegetation. Manatees have a life span of fifty to sixty years. Full grown manatees weigh from four hundred pounds to over a thousand pounds and can reach ten feet in length.

Life Cycle of a Manatee | Sciencing

Manatees have a small life cycle, but they go through a lot to become a father or a mother. When the calf is about to be born, the mother lays on her back so the manatee can come out. A born calf will weigh up to 60 pounds and is 4 feet long; the calf already knows how to swim.

The Life Cycle of Manatees - 415841.wixsite.com

Life Cycle. After a manatee is born, it stays with its mother until it is weaned, which means it starts eating sea grass instead of nursing. After that point the baby becomes independent and goes off on its own, and the mother is able to breed again. Typically, manatees only give birth to one baby about every two years.

Manatees: Life Cycle & Reproduction | Study.com

Transcript of Manatee Life Cycle. The mom has the baby at about age five, and the dads are around six to seven years old. Manatees live to about sixty years old. If they don't die of old age then they'll be eaten by sharks, alligators, or crocodiles. The egg is when it's in its moms stomach. The nymph is how it looks like a adult when it's born.

Cousin of the Manatee. Three are manatee species, and one is called the dugong. Dugongs are cousins of manatees, and in many ways, they are very similar. One major difference is the shape of their tail. Manatees have rounded tails, but dugong tails look more like a whale's.

Dugong Life Cycle & Mating | Study.com

Life Cycle. The West Indian manatee can mate at any time of the year. The female manatee reaches breeding age when she is nine years old. When a female is ready to mate, she may be followed by up to 20 males! The males will push and shove each other to try to get closer to the

female.

West Indian Manatee - Trichechus manatus - NatureWorks

Aquatic Life. From above the water's surface, the animal's nose and nostrils are often the only thing visible. Manatees never leave the water but, like all marine mammals, they must breathe air at the surface. A resting manatee can remain submerged for up to 15 minutes, but while swimming, it must surface every three or four minutes.
